

Table B2A - Flight Training Device (FTD) Objective Tests								
QPS REQUIREMENTS					INFORMATION			
Test		Tolerance	Flight Conditions	Test Details	FTD Level		Notes	
Entry Number	Title				5	6		7
4.a.4	Light point size.	Not greater than 8 arc minutes.	Not applicable.				confirmed by calculations in an SOC.	
							X	Light point size should be measured using a test pattern consisting of a centrally located single row of white light points displayed as both a horizontal and vertical row. It should be possible to move the light points relative to the eyepoint in all axes. At a point where modulation is just discernible in each visual channel, a calculation should be made to determine the light spacing. An SOC is required to state test method and calculation.
4.a.5	Raster surface contrast ratio.	Not less than 5:1.	Not applicable.				X	Surface contrast ratio should be measured using a raster drawn test pattern filling the entire visual scene (all channels). The test pattern should consist of black and white squares, 5° per square, with a white square in the center of each channel. Measurement should be made on the center bright square for each channel using a 1° spot photometer. This value should be at least 5:1.
