

Table B2A - Flight Training Device (FTD) Objective Tests									
QPS REQUIREMENTS					INFORMATION				
Test		Tolerance	Flight Conditions	Test Details	FTD Level			Notes	
Entry Number	Title				5	6	7		
4.a.7	Light point brightness.	Not less than 20 cd/m ² (5.8 ft-lamberts).	Not applicable.					<i>Note. — During contrast ratio testing, FTD aft-cab and flight deck ambient light levels should be as low as practical.</i> Light points should be displayed as a matrix creating a square. On calligraphic systems the light points should just merge. On raster systems the light points should overlap such that the square is continuous (individual light points will not be visible).	
4.a.8	Surface brightness.	Not less than 14 cd/m ² (4.1 ft-lamberts) on the display.	Not applicable.				X	Surface brightness should be measured on a white raster, measuring the brightness using the 1° spot photometer. Light points are not acceptable. Use of calligraphic capabilities to enhance raster brightness is acceptable.	
4.b	Head-Up Display (HUD)								
4.b.1	Static Alignment.	Static alignment with displayed image. HUD bore sight must align with the center of the displayed image spherical pattern.					X	Alignment requirement only applies to the pilot flying.
